Keysight Hackathon Dev Kit Getting Started

Blake Vermeer

March 21, 2017

Date Performed: March 21, 2017
Company: Keysight Technologies

1 Overview

The Keysight Hackathon Dev Kit consists of:

- Raspberry Pi 3 with 2.8" capacitive touch screen shield

- Custom Yocto Linux image pre-loaded on the Raspberry Pi 3

- Fedora Linux Virtual Machine image with Qt Creator and the Yocto SDK pre-installed and configured with Qt Creator

2 Installing VirtualBox

3 Import the Virtual Machine

4 Launching the Virtual Machine

5 Start Qt Creator and Connect to the Raspberry Pi
